Where there are valid vessels experience factors ("VEFs") for both mother Vessel and daughter vessel, the VEFs shall be applied in the quantity calculation.

Where only one or neither of the Vessels has a valid (VEF), no VEF shall be applied. In that case, the average between the discharge figure of the mother Vessel and the receipt figure of the daughter vessel as indicated in paragraph (a) above, shall apply, for as long as the quantity variance is within industry accepted tolerance.
d) For Apapa Port discharges, the output quantity shall be determined based on the Vessel arrival figures pursuant to the report of the Independent Inspectors as indicated in Article 13.3 (i) above.
